

ABSORBENT MANAGEMENT SOLUTIONS

Smarter Alternatives to Landfilling

Proper handling of absorbent materials is essential for sustainability, compliance, and cost control. At Aaron Oil, we recover fluids from oil-soaked pads, booms, rags, and contaminated solids, helping businesses reduce landfill waste and minimize environmental liability. Our process supports responsible disposal and resource recovery while keeping your operations compliant and efficient.

Every year, more than **500,000 drum-equivalents** of absorbent waste are generated across the United States, and a significant portion is sent to landfills. Once disposed, these materials can create long-term environmental risk and regulatory exposure.

AOC provides a sustainable alternative. Through advanced processing, we recover reusable hydrocarbons & reduce waste volume, creating a smarter pathway for absorbent materials.

How Our Program Works

01 | Collection and Handling

Absorbents can be picked up on a scheduled basis, collected during industrial cleaning projects, or delivered directly to our Saraland facility or satellite locations.

02 | Specialized Processing

At our Saraland facility, absorbents are processed through a dedicated Container Processing Unit. Materials are pressed to recover usable hydrocarbons and reduce solid waste volume.

03 | Responsible Final Management

Recovered fluids are recycled, and remaining solids are managed under strict disposal standards. Our process meets TCLP and RCRA requirements to ensure environmental compliance.

Better for Your Business and the Environment

- ✓ Less absorbent waste sent to landfill
- ✓ Usable hydrocarbons recovered for recycling
- ✓ Reduced environmental and regulatory liability
- ✓ Support for sustainability and ESG reporting
- ✓ Compliant management of remaining solids

Absorbent Waste Streams We Manage

Oil-Soaked Absorbents

Pads, booms, rags, and spill response materials.

Petroleum-Contaminated Absorbents & Solids

Absorbents from virgin petroleum spills and cleanup operations.

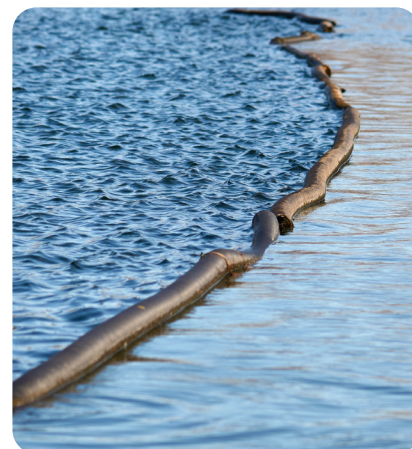

Industrial Absorbents

Materials used in manufacturing and industrial cleaning.

Industry-Specific Absorbents

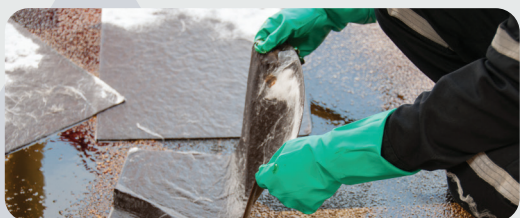

Tailored solutions for offshore, marine, and rail applications.

Flexible Container & Collection Options

We offer scalable programs that fit smoothly into facility operations. Materials can be picked up by our fleet or delivered to our Saraland, AL processing facility or satellite locations. Collection options include **drum exchanges**, **collector boxes**, **offshore-approved containers**, and **roll-offs** for larger volumes.

Upon arrival, absorbents are processed through our specialized Container Processing Unit, where materials are pressed to extract reusable hydrocarbons. This reduces the volume of solid waste and supports a more sustainable disposal pathway.

Compliance & Transparency

Our process is designed to protect your business and the environment. Every shipment is barcoded and tracked from pickup to processing, providing complete chain-of-custody transparency. Facilities receive detailed documentation that supports internal audits and regulatory reporting.

- ✓ **TCLP-compliant processing**
- ✓ **RCRA-compliant disposal**
- ✓ **Full cradle-to-grave documentation**

A Cleaner Path Forward

Absorbent Management supports a cleaner and more sustainable future. By recovering hydrocarbons and reducing landfill waste, our program helps your business lower its environmental footprint while maintaining complete regulatory confidence.
