

## INDUSTRIAL CLEANING SERVICES

# Keeping Facilities Safe, Clean, and Compliant

Maintaining critical infrastructure requires more than routine cleaning. It calls for trained crews, specialized equipment, and safe removal of hazardous residues. Aaron Oil delivers industrial cleaning for tanks, pipelines, railcars, terminals, and maritime vessels that reduce hazards and keep your facility compliant.

## Cleaning Solutions Built Around Safety and Performance

Our certified crews use high-pressure hydro-blasting, vacuum recovery, and vapor control systems to clean complex industrial assets with precision. We focus on safe entry, residue removal, and efficient project execution so your facility remains clean, compliant, and ready for continued operation. The services below represent the core cleaning capabilities we deliver for industrial and commercial operations.

### Our Certified Crews Provide:

- ✓ High-pressure hydro-blasting to remove heavy residues
- ✓ Vacuum recovery of sludge, liquids, and debris
- ✓ Tank degassing and vapor control for safe entry
- ✓ Precision cleaning of pipelines, railcars, & maritime vessels

### Tank Cleaning

Cleaning for ASTs, USTs, tanker trucks, and multi-compartment tanks.

### Sludge Management

Removal & recovery of sludges, residues, and tank bottoms from storage systems.

### Sump Management

Cleaning of oil and water separators, car washes, and sumps for reliable operation.

### Pipeline Cleaning

High-pressure cleaning to remove sludge, scale, and blockages for improved flow.

## Tank Degassing and Inspection

Before cleaning, inspection, or repair work can begin, safety must come first. Aaron Oil provides tank degassing services that **remove hazardous vapors** from **storage tanks, pipelines, and vessels** to create safe conditions for entry and maintenance.

Our team also performs detailed inspections and provides **cleaning certifications** that help facilities document compliance and prepare industrial assets for continued operation. By prioritizing safety, documentation, and regulatory readiness, we ensure your assets are prepared for efficient cleaning and long-term service.

## Resource Recovery and Waste Management

Many industrial cleaning projects generate recoverable petroleum materials. **Sludges, residues, and tank bottoms** are transported to our Saraland, AL processing facility where they can be recycled and returned to productive use. This supports sustainable operations and reduces waste throughout your facility.

All wash fluids, wastewater, and absorbent materials generated during cleaning are managed through our **Clean Water Act compliant Centralized Waste Treatment facility**. Oils, sediments, and contaminants are removed through a controlled treatment process that protects the environment and supports full regulatory compliance.

### Specialized Cleaning for Complex Industry Needs

Some operations require equipment and expertise tailored to demanding environments. Aaron Oil provides specialized cleaning services for maritime vessels, offshore platforms, and railcars.

Our trained crews and dedicated fleet of vacuum trucks, tanker trucks, and specialized cleaning equipment allow us to respond efficiently, manage unique site conditions, and deliver reliable service for industries with strict safety and operational requirements.

### Supporting Clean, Compliant, and Continuous Operations

Aaron Oil delivers industrial cleaning solutions that protect your operations and the environment. From tank cleaning and sludge removal to wastewater treatment and resource recovery, our team provides the experience, technology, and compliance support your facility needs to operate safely and efficiently.
