

## WASTEWATER TREATMENT SERVICES

# Clean Water Solutions for Industrial Wastewater

Aaron Oil provides Clean Water Act compliant treatment for oily water, PCW, and wastewater from industrial cleaning operations. Our specialized fleet and advanced CWT facility work together to ensure efficient collection, responsible treatment, and reliable protection for your facility and the environment.

## Smarter Treatment for Complex Wastewater Streams

Our treatment systems are engineered to handle challenging wastewater streams from industrial, maritime, and petroleum operations. Through **controlled separation** and **multi-stage treatment**, we remove oils, solids, and contaminants to ensure safe discharge and dependable environmental performance. Whether wastewater is collected during scheduled service or produced through cleaning activities, we provide a seamless path from pickup to certified treatment.

## Wastewater Streams We Treat

We are equipped to process a wide variety of industrial wastewater types. Each stream is managed with the appropriate **collection method**, **treatment approach**, and **compliance monitoring** to ensure responsible discharge and sustainable resource recovery.

- ✓ Oil-Contaminated Water
- ✓ Petroleum-Contaminated Water (PCW)
- ✓ Antifreeze and Coolants
- ✓ Industrial Wastewater
- ✓ Sump and Separator Water
- ✓ Marine and Offshore Wastewater

## How Our Wastewater Treatment Process Works

### 01 | Efficient Collection and Transport

Wastewater is collected through scheduled service or during industrial cleaning projects. Our fleet of vacuum trucks, tanker trucks, and multi-compartment units safely handles oily water, bilge water, PCW, sump water, and large-volume industrial wastewater. When possible, recoverable materials are separated at the source to reduce waste and enhance sustainability during transport.

### 02 | Advanced Treatment at Our CWT Facility

Our state-of-the-art CWT facility operates under a Federal Clean Water Act permit and is engineered to treat complex industrial wastewater with precision. Oils, hydrocarbons, solids, and other pollutants are removed through a controlled, multi-stage process. Recovered materials are sent for further processing, and treated water is discharged in accordance with POTW and SID permit requirements.

### 03 | Compliance Monitoring and Reporting

Each load entering our facility undergoes rigorous testing and monitoring. Third-party laboratories verify discharge quality to ensure compliance with current CWT discharge and SID permit standards. Customers receive complete tracking, documentation, and reporting to support internal audits and environmental compliance programs.

### Industries We Serve

**Petroleum Sector:** Crude oil terminals, pipelines, refineries, and storage facilities.

**Maritime Sector:** Bilge water, vessel wash water, offshore wastewater, and hydro-blasting fluids.

**Industrial Sector:** Separators, sump cleaning, equipment cleaning, and hydro-blasting wastewater.

### Your Partner in Clean Water Compliance

Aaron Oil combines efficient collection, advanced treatment, and proven environmental stewardship to deliver reliable wastewater management. From oily water and PCW to bilge water and industrial wash fluids, we provide a trusted solution that safeguards your operations and the environment.
